

Performance Assessment

“Viscosity has earned their place as a most valued Partner for our IT department. Their professionalism and dedication allowed us to meet our commitments to internal business units, and provide a better performing, better architected system.”

- Senior Director,
IT McAfee, Inc.
(an Intel Company)

Oracle Performance Assessment

Achieving ideal performance requires that the performance of each component of the system stack is optimal. The Oracle Performance Assessment takes a deep dive into the customers Oracle stack.

We are authors of Oracle best practices and will empower your team to manage and optimize your Oracle stack. Customers typically enlist in these services before a major change, such as a RAC add node, database upgrade, or as part of annual review.

While there is no single, universal approach to how databases should be managed, monitored, and optimized; our method has been written and vetted by authors of industry best practices.

Viscosity North America’s Performance Assessment Includes:

- Has the database and OS been setup correctly and been properly tuned?
- What queries are performing sub-optimally and need tuning?
- What statistics are being collected?
- Where is the real bottleneck and how can it be eliminated?

Upon completion of the review, we provide detailed documentation with the findings and recommendations to help you improve the performance of your Oracle systems and your applications that run on top of them.

Whether you’re consolidating onto Oracle Exadata, RAC, EMC, VCE, SQL, VMWare or Oracle VM, when you lean on Viscosity, you’re partnering with genuine experts and acclaimed authors of industry best practices. Learn more about how you can maintain and maximize your investments at www.viscosityna.com. For more information, email us at sales@viscosityna.com.
