

Virtualization & Private Cloud Expertise

“Viscosity has earned their place as a most valued Partner for our IT department. Their professionalism and dedication allowed us to meet our commitments to internal business units, and provide a better performing, better architected system.”

- Senior Director,
IT McAfee, Inc.
(an Intel Company)

Oracle Performance Assessment

We specialize in private database cloud. Whether you choose to leverage a hypervisor, implement RAC or leverage Exadata as your consolidation platform, we can take you where you want to go. We also will help you with your Oracle licensing by telling you where you can over-commit and where you need to be conservative.

We have VMware Certified Professionals, Oracle VM Certified Specialists in the x86 platform, and strong skills in Oracle Sun virtualization. Since we are virtualization agnostic, we can help customers decide which virtualization technology makes the most business sense.

With Viscosity’s expertise and deep knowledge in virtualization technologies, we can help customers migrate their silo’ed infrastructure to the virtualized database infrastructure. Our most heavily leveraged skill set has been in the area of migrating customers off of AIX and Solaris platforms to Linux (to VMware or OVM).

Additionally, we have developed best practices for implementing database consolidation using RAC and ASM, as well as in Exadata Configurations. We have RAC expertise in AIX, HP, Sun and Linux platforms (Red Hat, Oracle Linux and SuSe) and on NFS, OCFS2, and ASM storage platforms. Our panel of RAC experts have implementation experience in 10g / 11g / 11g Release 2 RAC.

Whether you’re consolidating onto Oracle Exadata, RAC, EMC, VCE, SQL, VMWare or Oracle VM, when you lean on Viscosity, you’re partnering with genuine experts and acclaimed authors of industry best practices.
