Delphix Data Masking

The Delphix Masking Engine is software for your organization's on-premises or off-site data center, as well as a public or private cloud environment.

The engine replaces sensitive data with a fictitious equivalent to be used for development, testing, and analytics without the risk of exposing your original data to a breach.

Unlike encryption measures that can be bypassed through obtaining user credentials, masking irreversibly protects data in downstream, non-production environments.
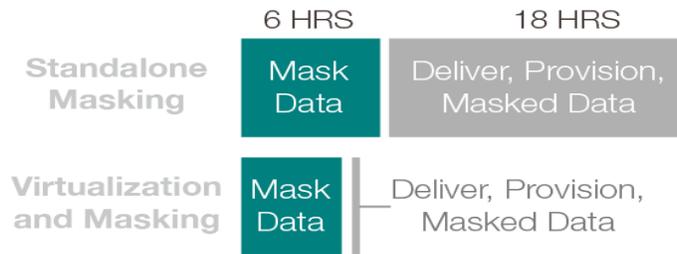

With a single software solution, customers can perform data masking across a variety of platforms, including data in databases and file systems. The Delphix Masking Engine is **designed to scale**, meeting the needs of even multi-terabyte, multi-location deployments while remaining simple to install and use: there is **no programming or administrative involvement** required. By combining data masking with virtual data in a single, secure architecture, data masking provides triple benefits to customers: enhanced security, greater agility, and lower costs for applications projects.

We are a Delphix partner to accelerate, simplify, and transform EBS application customization and enhancements.

Viscosity North America is the preferred channel partner of Delphix in the Central and South region of the United States. With an expert professional services staff that specializes in installing and managing all the various complex requirements and providing solutions with data virtualization platforms.

Whether you're looking to add Data Masking to your business or consolidating onto Oracle Engineered Systems, EMC, VCE, VMWare, and Oracle VM, when you lean on Viscosity, you're partnering with genuine experts and acclaimed authors of industry best practices.
